Summary

Full Stack Developer with 2+ years of experience building scalable, high performance web application using **MERN** stack. Skilled in designing responsive user interfaces, developing efficient backend services and optimizing application performance for large-scale systems.

Skills

Language & Frameworks: JavaScript, Node.js, Express.js, React.js, Redux, TypeScript, Next.js, Tailwind

Databases: MongoDB, MySql

Cloud & DevOps: AWS, Git, CI/CD Pipelines

Tools & Methodologies: Agile, GitHub, REST APIs, Microservices

Experience

Software Engineer

June 2024 – Present

Tech Mahindra Ltd. (Hybrid)

Tech Used: React.js, Node.js, MongoDB, Tailwind

- Created and improved responsive React.js interfaces, improving page load performance by **30%** and enhancing overall user experience for thousands of daily users.
- Enforced 10+ scalable **REST APIs** using Node.js and Express.js, enabling seamless frontend-backend communication across microservices.
- Architected 15+ reusable and **modular UI components using React.js**, reducing code duplication by **40%** and improving development efficiency and feature delivery speed across cross-functional teams.
- Revamped and optimized the frontend codebase by implementing **lazy loading, code splitting, and dynamic imports**, reducing initial page load time by **45%** and improving overall application performance scores by **30%**.
- Contributed to **CI/CD pipeline** automation using **Jenkins**, reducing deployment time from 25 minutes to under 10 minutes and minimizing manual deployment effort by **70%**.
- Actively participated in code reviews and Agile sprints, maintaining high code quality and achieving **95%+** sprint delivery consistency.

Full Stack Development Intern

Oct 2021 - Nov 2021

Internshala. (Remote)

Tech Used: React.js, Node.js, Express.js MongoDB

- Developed 5+ dynamic and responsive **React.js** modules with reusable components, improving user experience and reducing UI development time by **30%**.
- Built and integrated 8+ RESTful APIs using Node.js enabling seamless frontend-backend communication.
- Gained hands-on experience in full-stack application development and deployment workflows.

Projects

BNSF Railway | *React.js, Node.js Tailwind*

- Worked on a large-scale enterprise platform built on **microservices architecture**.
- Established reusable UI components and enhanced workflows, reducing manual effort by **40%**.
- Enhanced system efficiency through performance optimization and structured code practices.

DevPairr - Connect Developers | *MERN, Redux, JWT*

[🔗 Live Demo](#)

- Developing a full-stack **MERN** application enabling developers to connect, interact, and collaborate.
- Implemented **JWT-based authentication/authorization and Google Auth**, ensuring secure user onboarding and session management.
- Designed and integrated **RESTful APIs** for user profiles, connection requests, and interactions.
- Architected **global state management with Redux**, ensuring predictable data flow and reducing state-related errors by **60%** across all platform modules.
- Built real-time chat functionality using **Socket.IO**, enabling low-latency messaging between users.

Education

B.Tech, Information Technology

2019 - 2023

Goel Institute of Technology and Management, Lucknow

CGPA: 8.1 / 10
